Project Financial Management Workflow — User Manual

This document explains how the application works. It is a guide to read, not a menu for navigating the system.

1. Overview

The system links procurement, central warehouse inventory, facility (kiosk/PHC) stock, client uptake, learning data, and finance (COA, journals, expenses).

2. Login and roles

Staff log in with assigned roles. Program managers approve RFQs and awards. Procurement officers manage RFQs and vendor links. Store officers receive goods and dispatch. Finance posts invoices and payments.

3. Procurement flow

Raise RFQ with line items from the product catalogue → Program Manager approval → share vendor links → vendors submit quotations (unit costs + PDF) → committee evaluation → recommend award → PM award → vendor accept → GRN → Main Warehouse stock → invoice processing.

4. Inventory

Main Warehouse receives stock on GRN. Dispatch moves stock to kiosks/PHCs. Uptake (administer) reduces facility stock and posts expense. Transfers and returns reconcile warehouses without GL unless configured.

5. Learning data

LQ Headline and LQ1–LQ11 forms capture programme learning. Each form includes client name, phone, and unique number. Use Learning under Program Core.

6. Finance

Chart of accounts, journals, trial balance, budget and expense codes. Operating currency can be set under admin. Clear sample data from Expenses when starting live use.

7. Backup

Admin Backup downloads operational data only (not passwords). Restore replaces operational data and keeps users when using the ops-only restore design.
